PRODUCT: Vertex Ventures TENS Unit

As the referring provider, I am prescribing the Vertex Ventures TENS Unit, an FDA-cleared (FDA 510K #K200237) pain management device designed to deliver Transcutaneous Electrical Nerve Stimulation. The device provides temporary relief of minor pain by sending gentle electrical pulses to the skin, which help block pain signals from reaching the brain and encourage the release of endorphins, the body's natural painkillers. This non-invasive treatment aids in reducing discomfort and promoting localized relief without the need for medication. The Vertex Ventures TENS Unit is suitable for diverse needs and should be used for a duration recommended by the physician, generally between 15-30 minutes per session, depending on individual treatment requirements. I certify that this device is medically necessary and indicated to treat this patient's condition effectively.
